Profile

Software Engineering MSc student with a strong interest in frontend, UI engineering and digital product development. I combine software engineering foundations with UI/UX experience to translate requirements and user needs into functional and maintainable applications. I am particularly interested in roles where engineering, product and user experience come together.

Languages: Portuguese (Native) | English (B2 — Cambridge English First) | Spanish (Intermediate)

Projects

AssetGuard — Mobile Security Inspection Management App

Android | Kotlin | Jetpack Compose | Firebase | OSMdroid

Three-person academic Android project for planning and carrying out route-based security inspections through geographic checkpoints.

- Took primary responsibility for the application's design and implementation, defining its visual direction and creating functional UI/UX prototypes and user flows before developing the core planning and inspection experience within an MVVM and Repository-based architecture.
- Built the map and location-based inspection experience, including route and checkpoint visualisation, user-location tracking, proximity-based inspection validation, and offline-first data access and synchronisation with Firebase.

MatchBy — Sports Matchmaking Web Platform

Blazor | C# | .NET | PostgreSQL | Tailwind CSS | Supabase | OpenStreetMap

Four-person academic project developed over one semester to help users discover and organise local sports matches.

- Participated in requirements elicitation and translated user and product needs into wireframes, responsive page layouts, visual styles and reusable UI elements, then implemented key interfaces including Home, Match, Profile and Match Creation.
- Developed core user and match-related functionality, including user profiles, sports preferences, match search and creation, and integrated OpenStreetMap for map-based location selection and address geocoding; also contributed to the application's data modelling.

HomeMaestro — Smart Home Automation System

Java | Spring Boot | TypeScript | PostgreSQL | MQTT | Python | Docker

Four-person academic project for Software Architecture and Design, focused on managing and automating IoT devices through real-time monitoring and configurable automation workflows.

- Designed key parts of the system's data and domain model, defining relationships between devices, spatial divisions and automation processes, including triggers, events, actions and execution constraints.
- Implemented functionality across the automation and device-management flows, including MQTT communication with simulated Python devices, device organisation using design patterns, and automation features such as trigger management, scheduled execution and user notifications.

Experience

UI/UX Design, Visual Communication & Events Member

October 2024–July 2026

NIAEFEUP — Informatics Student Group of AEFEUP, Porto, Portugal

Informatics and Computing Engineering student-led organisation, developing projects and initiatives for the academic community.

- Contributed to the UI/UX design of the NIAEFEUP website and UNI project, creating interface components, colour palettes and interactive prototypes in Figma.
- Collaborated with development teams to translate project requirements and feedback into interface designs, refining information structure, usability and visual consistency throughout long-term development projects.

Co-Lead, Image & Communication Department

May 2025–October 2025

SINF 2025 — Semana de Informática 2025, Porto, Portugal

FEUP's informatics week, connecting students and professionals through talks, workshops and career-focused activities.

- Took primary ownership of the department's planning and execution, coordinating day-to-day work, setting priorities and ensuring the timely delivery of design and communication materials.
- Defined the event's visual identity, including colour palette, typography and visual language, and created reusable templates and custom iconography to maintain consistency across digital, social and physical touchpoints.
- Led the UI/UX direction of the official event website, working closely with the development team to define its structure, visual direction and overall user experience in line with the event's identity.

Visual Communication & UI/UX Team Member

December 2024–April 2025

ENEI — Encontro Nacional de Estudantes de Informática, Portugal

Event organised by Informatics students from FEUP & ISEP, bringing together students and professionals through talks, workshops, networking activities, competitions and social events.

- Contributed to the visual communication of the event, creating digital assets and promotional materials while maintaining consistency with the established visual identity.
- Contributed to the UI/UX design of the official website, collaborating with the communication and development teams on content organisation, interface structure and visual consistency.

Education

MSc in Software Engineering

2025—Present

Faculty of Engineering of the University of Porto (FEUP)

Software Engineering Laboratory | Requirements Engineering and Software Modelling | Software Architecture and Design | Mobile Computing | Software Testing Verification and Validation

BSc in Informatics and Computing Engineering

2022—2025

Faculty of Engineering of the University of Porto (FEUP)

Software Engineering | Database and Web Applications Laboratory | Databases | Web Languages and Technologies | Human Computer Interaction

Technical Skills

Frontend & Mobile: TypeScript, JavaScript, React, SvelteKit, HTML, CSS, Tailwind CSS, Kotlin, Jetpack Compose, Flutter, Dart

Backend & Data: Node.js, Java, Spring Boot, C#, .NET, PostgreSQL, Firebase, Supabase, SQL, Laravel

Software Engineering & Tools: Git, GitHub, GitLab, Docker, REST APIs, UML, Agile/Scrum

UI/UX & Design: Figma, Adobe Photoshop
